### **Executive Summary**

In June 2014, Live Healthy Napa County delivered a call to action for community partners to come together and focus on tackling one of the most significant, pervasive issues affecting health in our community: obesity. Over eighty stakeholders answered that call and came together to develop a shared vision, contribute innovative, strategic ideas, and committed to taking action while developing the first ever Napa County Community Obesity Prevention Plan.

The Napa County Community Obesity Prevention Plan is the first "component plan" to be developed following the completion of Live Healthy Napa County's (LHNC) Community Health Improvement Plan (CHIP). Component Plans allow community stakeholders to focus collectively on a specific theme or issue area that has arisen as part of a larger community assessment or planning process.

Early in the planning process, community partners mutually agreed to the vision, "Our community embraces a culture of health where every person has access to and is aware of nutritious food, opportunities for exercise, and safe outdoor places that inspire people to be active and thrive." This plan is a roadmap for how to make that vision a reality.

This Napa County Community Prevention Plan includes collaboratively developed goals, objectives, and strategies that will support the Napa County community in achieving the overarching goal of collectively maintaining a healthy weight. Each strategy has an assigned organizational leader, a list of partners, an associated performance measure and timeframe, and identified resources needed to ensure success. Partners will work together and hold each other accountable for taking action to implement the agreed upon strategies.

Our goals for encouraging and supporting healthy weight in Napa County include the following:

- 1. Promote the availability and affordability of healthy food and beverages
- 2. Educate the community on how to make healthy choices for food and beverages
- 3. Encourage and support breastfeeding
- 4. Increase access to opportunities that encourage physical activity
- 5. Strengthen community partnerships to improve coordination of policy and organize for change
- 6. Increase and strengthen awareness and understanding of how protective and positive experiences across the life course create health outcomes

# **Community Partners**

We would like to extend a special thank you to all community partners who contributed to creating the Napa County Community Obesity Prevention Plan.

| Name                | Organization  | Title   |
|---------------------|---|---|
| Joseph Alvarez      | Napa Valley Unified School District   | Director of Student Services                                |
| Lynn Anderson       | Napa Valley Unified School District   | Sodexo Food Service Consultant                              |
| Deanna Antovich     | Community Member  |   |

### **Special Recognition**

In addition to the substantive expertise and contributions from our community partners listed above, we would also like to extend sincere appreciation to the following individuals and organizations that provided essential support to make this planning process a success.

Thank you to the Nutrition Education Obesity Prevention - Healthy Cooking with Kids, Inc. staff who helped with setting up and taking down of equipment for each meeting, taking minutes, and helping to ensure that meetings ran smoothly. Specifically, thank you to Whitney Ball, Aly Hite, Jessica Engle, and Melissa Goltiao for taking these tasks on.

Thank you to Dr. Jennifer Henn, epidemiologist for Napa County HHSA Public Health, for important statistical data around the prevalence and significance of obesity in our local community. Thank you for offering technical expertise throughout the planning process.

Thank you to Dr. Karen Smith, Health Officer for Napa County Health & Human Services Agency's Public Health Division for providing vision, guidance, and encouragement to ensure the process of developing this Plan was a success.

For providing this group with wonderful meeting spaces, we would like to thank the Yountville Community Center, Napa County Transportation and Planning Agency, and Napa County Health & Human Services Agency for providing a place for us to come together to dive into this important work.

Thank you to Loralyn Taylor, Public Health Intern, for your generous, academically engaged contributions to this plan and for your willingness to step in and help.

For providing this group with energizing physical activity breaks, thank you to Vimlan VanDien, Diana Meehan, Lise Hellie and Jennifer Heminger. Thank you for demonstrating how to incorporate mindful physical activity into long (and even short) meetings.

Lastly, thank you to Danielle Niculescu and Hannah Euser for facilitating this visioning and planning process, ensuring open dialogue, encouraging community input, and for putting all the pieces together to make this plan an important step in enhancing better health for the entire Napa County community.

### **Problem Statement**

It is widely acknowledged obesity is a serious issue in the United States. Abundant unhealthy food options, lack of physical activity, and economic and social inequity are only some of the factors that contribute to making United States one of the most obese countries in the world. The obesity epidemic is prevalent throughout the entire population affecting both adults and children. Recent data from the Centers for Disease Control and Prevention (CDC) shows that 28.9 % of adults nationwide are obese, along with 17% of children ages 2-19<sup>1</sup>.

Being obese in and of itself is not the only problem. More serious concerns relate to the chronic diseases that obesity is known to cause including heart disease, type II diabetes, and certain cancers. The issue is serious and immediate. The prevalence of obesity continues to rise. Some states have seen obesity rates more than tripling in the past decade. If nothing is done to prevent the rise of obesity amongst children, this generation is predicted to be the first in more than a century to have a shorter life expectancy than their parents<sup>2</sup>. Obesity remains one of the most serious public health problems of our time and deserves policy development and other interventions to help reverse the current trend.

The classification of obese and overweight are defined, for most data, by evaluating a person's body mass index (BMI). A person with a BMI of 25.5-29 is considered overweight and a person with a BMI greater than 30 is classified as obese<sup>3</sup>. CDC data from 2013 shows that 35.4% of the population is overweight based on their BMI. Combined with the obesity rate means 64.3% of the population is either overweight or obese in the U.S.. California's obesity and overweight statistics are slightly better than the national average but vary between counties and cities throughout the state. It is important to note that BMI may not the best indicator of risk for some overweight individuals as it does not take into account muscle mass and percent body fat. It is possible that some individuals, like athletes, may be classified as overweight based on their BMI but are in fact in very good health. BMI does, however, remain the most common and consistent way to evaluate possible weight problems in a population and is used in a majority of studies.

California is one of only eight states in the nation where the obesity rate is between 20-25%<sup>4</sup>. However, when the data is disaggregated by county a different trend appears. Counties like Marin and San Francisco have low obesity rates of 15% while Yuba has an obesity rate of 31% (Countyhealthrankings.org). Similar trends appear when evaluating the percent of individuals who are overweight. In Marin County, 40% of individuals are overweight or obese, while in Imperial County 73%

<sup>&</sup>lt;sup>2</sup> Biro, F. M., & Wien, M. (2010). Childhood obesity and adult morbidities. American Journal of Clinical Nutrition. doi:10.3945/ajcn.2010.28701B

<sup>&</sup>lt;sup>3</sup> Centers for Disease Control and Prevention. (2013). FastStats - Overweight Prevalence. Retrieved from http://www.cdc.gov/nchs/fastats/obesity-overweight.htm

<sup>&</sup>lt;sup>4</sup> Centers for Disease Control and Prevention. (2014). Obesity and Overweight for Professionals: Data and Statistics: Adult Obesity - DNPAO - CDC. Retrieved from <a href="http://www.cdc.gov/obesity/data/adult.html">http://www.cdc.gov/obesity/data/adult.html</a>

of the population is overweight or obese<sup>5</sup>. The rate of obesity and overweight, like so many other chronic conditions, is clearly linked to where people work, play, and live.

Locally, Napa County has an obesity rate of 28.9%, higher than the statewide average of 23.2%, and an overweight percentage of 31.9%, slightly lower than the state average of 34.6% (CHIS, 2013). Within the county, obesity rates vary based on demographics. Individuals 200% or more below the federal poverty level are twice as likely to obese compared to those 400% or more above the federal poverty level (NCCCHA, 2013). In addition, more than 40% of 5th, 7th and 9th graders are overweight or obese, a rate that increased 6% in a five year span. This was the largest increase among bay area counties (NCCCHA, 2013). Higher obesity rates in the County were also seen among male students, African-American students and Hispanic/Latino Student (NCCCHA, 2014)<sup>6</sup>. Factors which may affect the higher rate of obesity in Napa County include lack of access to healthy food, lack of spaces and opportunities for exercise, lower exclusive breastfeeding rates, and lack of knowledge on habits to maintain a healthy weight.

### **Obesity Prevention Planning Process**

Napa County is fortunate to have strong, committed community partners and organizations that care deeply about improving health and wellness in the place where we work, live, and/or play. When a call went out to LHNC partners to focus on solving the problem of obesity on a local level, over eighty people answered and agreed to come together to develop the first ever Napa County Community Obesity Prevention Plan.

The Napa County Community Obesity Prevention Plan is the first "component plan" to be developed following the completion of Live Healthy Napa County's (LHNC) Community Health Improvement Plan. Component plans allow community stakeholders to focus collectively on a specific theme or issue area that is identified as part of a larger community assessment or planning process. Obesity was identified as one of the top three challenges facing Napa County residents in the Community Health Assessment.

### **VISION**

Our community embraces a culture of health where every person has access to and is aware of nutritious food, opportunities for exercise, and safe outdoor places that inspire people to be active and thrive.

Beginning in June 2014, LHNC partners committed to four meetings to work collaboratively towards developing a vision, goals, objectives, and strategies to support every person in our community in maintaining a healthy weight. In preparation for this important work, Napa County HHSA Public Health Epidemiologist, Dr. Jennifer Henn provided local and comparative statistics relevant to the issue of overweight and obesity in Napa County. The Obesity Prevention Planning group used this data for developing

goals, objectives, and strategies.

Understanding the problem and current community efforts helped lay the framework for the obesity prevention group to develop our vision. During the visioning process, partners were asked to think big about making long lasting, systemic change for the Napa County community. After productive brainstorming and refinement, the group agreed to the vision statement: Our community embraces a culture of health where every person has access to and is aware of nutritious food, opportunities for exercise, and safe outdoor places that inspire people to be active and thrive.

Upon solidifying a vision for this plan, partners worked to develop goals, objectives, and subsequent strategies for each of the areas. For each strategy, lead partners were asked to identify a timeline for implementation using three categories: immediate (within 12 months), short term (within 2 years) and long term (within 5 years). The strategies demonstrate the commitment of many partners throughout Napa County to improving health and wellness in our community.

### **GUIDING PRINCIPLES**

- Life Course Perspective. Protective and risk factors throughout the life course are strong determinants of health and wellness.
- Do No Harm Messaging. Protect children and adults from blame and harm.
- Positive Solutions. Present ideas and interventions from a positive perspective.
- Shared Vision. Form the foundation for building a healthy future.
- Dialogue. Ensure respect for diverse voices and perspectives during the collaborative process.
- Data and Education. Inform each step of the process.
- Partnerships and Collaboration.
   Optimize performance through shared resources and responsibility.
- Strategic Thinking. Foster a proactive response to the issues and opportunities facing the system.
- Celebration of Successes. Ensure that contributions are recognized and sustain excitement for the process.

Throughout the strategic planning process, community partners focused significant attention on the importance of maintaining a life course perspective when addressing obesity. Goals for a healthy weight in a community need to be balanced with a guiding principle to "do no harm" and to protect both children and adults from blame and harm.<sup>7</sup> Community partners emphasized the need for preventive

<sup>&</sup>lt;sup>7</sup> Partners of the Community Obesity Prevention Plan aim to approach the topic of overweight and obesity in Napa County by utilizing evidence based approaches and models, such as the Ellyn Satter Institute model. (http://www.ellynsatterinstitute.org)

strategies to address unintended negative outcomes in families and children. This principle includes avoiding the inadvertent suggestion or prescription of dieting and other weight loss techniques which have been shown to cause restrictive eating, shaming, depression and stereotyping. Children especially need to be protected from harmful practices and statements that focus on weight and food intake, rather than societal and familial environments. The goal for a healthy weight in a community should also be balanced with the findings that longevity and good health include multiple facets and choices. This concept was reported in the research on "Blue Zones" throughout the world, and was well stated in the World Health Organization definition of health as "a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity."

Most significantly, throughout this planning process, new partnerships and innovative ideas were developed that will contribute to large scale community change for Napa County. Partners came to the table with out of the box ideas and new perspectives on partnering with one another. The Strategy Matrix below, shows the degree to which community partners have committed to strategic action that reaches well beyond traditional approaches to obesity reduction. The enthusiasm and dedication of contributing partners will continue to inspire us over the next five years as we work collectively to increase the proportion of people in Napa County who are able to maintain a healthy weight.

### **Live Healthy Napa County Background**

The Napa County Community Obesity Prevention Plan is the first of a planned series of "component plans" resulting from the extensive community-driven work of Live Healthy Napa County (LHNC). Component plans are meant to bring a concerted focus to specific community-wide issue areas discovered through an assessment process. LHNC recognizes that by

### **LHNC VISION**

In Napa County, community members will take responsibility for improving and sustaining health through shared leadership, strategic planning, meaningful community engagement and coordinated action.

providing opportunities for community partners to come together to strategize on specific areas needing improvement, we will demonstrate broad collective impact in the local community.

The Live Healthy Napa County (LHNC) collaborative was created in July 2012 from the idea that improving overall health requires a shared responsibility among diverse stakeholders. LHNC is a collaboration whose intention is to promote and protect the health and wellbeing of every member of the community. LHNC is a public-private partnership bringing together, among others, representatives from health, healthcare, business, public safety, education, government, nonprofits, and the general public to develop a shared understanding and vision of a healthier Napa County.

LHNC acknowledges that Napa County community members understand that improving the health of individuals, families, and communities requires a comprehensive understanding of health, one that considers all of the conditions in which people are born, grow, live, work, and age, including the health system. By addressing all of these conditions, sometimes called the "social determinants of health," people and communities can be healthier and enjoy an enhanced quality of life.

The LHNC collaborative has produced the following three pivotal documents through utilization of Mobilizing for Action through Planning and Partnerships (MAPP) framework for their work. The documents are available on the LHNC website (http://countyofnapa.org/lhnc).

- 1. Comprehensive Community Health Assessment (CHA): The CHA aims to establish the foundation for sustainable improvements in health in Napa County. As part of the comprehensive assessment, LHNC conducted three community assessments to better elucidate local health issues that are important to the community, measure the capacity and capability of the local public health system, and examine data on the health status of Napa County and its residents.
- 2. Community Health Improvement Plan (CHIP): The CHIP is a long-term, systematic effort to address public health issues based on the results of the CHA and a community health improvement process. It helps to provide support for developing new policies and determining health promotion strategies.
- **3. Community Health Action Plan (CAP):** The CAP provides a roadmap for stakeholders to begin implementing the CHIP. The plan details strategic steps that put priority areas and strategies into action.

The Napa County Community Obesity Prevention Plan builds on the data and strategic planning efforts reported in these documents.

# **Policy Agenda**

The Napa County Community Obesity Prevention Partners agree that the following policies are important to consider when developing new or updating current policies to have larger impact on community change.

| Goal Area  | Policy Agenda  |
|--|--|
| Promote the availability and affordability of healthy food and beverages   | <ul> <li>Affordable healthy food and beverages policies in schools, workplaces and the community; such as healthy snack policy</li> <li>Healthy vending machine choices- all county parks, recreation centers and agency buildings have healthy options for at least 50% vending machine options</li> <li>Implement "market match" program at all Farmers Markets county wide</li> <li>Commit to avoid bringing candy, cookies, cakes and other foods and beverages of limited nutritional value into the office for group consumption</li> <li>County/city designated sites for farmers markets in low income neighborhoods</li> <li>Offer free potable water at all schools, county buildings, and recreational areas</li> </ul> |
| Educate the community on how to make good choices for healthy food and beverages Encourage and support breastfeeding Increase access to opportunities that encourage physical activity | <ul> <li>Nutrition labeling and coding on all vending machines on city/ county property and in city/county buildings</li> <li>Implement healthy signage policy for corner stores, especially those around schools</li> <li>Implement breastfeeding friendly policies at workplaces county wide</li> <li>Local hospitals will become Baby Friendly</li> <li>Increase free recreation space/ trails/ parks</li> <li>Offer physical education class at all elementary schools</li> <li>Implement workplace wellness policies incorporating active meetings and stretch breaks</li> </ul>  |
| Strengthen community partnerships to improve coordination of policy and organize for change  | <ul> <li>Maintain adequate lighting via street lights on all neighborhood streets</li> <li>Promote the consideration of health in all policies in Napa County</li> <li>Develop procurement policies that require food purchases made with public funds to be healthy</li> <li>Implement policies that encourage the purchasing of local foods</li> <li>Advocate for blending, braiding, and collaborative funding solutions at the federal, state, and local levels</li> <li>Advocate for organizational policies and practices that encourage and require cross sector partnerships</li> </ul>  |
| Increase and strengthen awareness and understanding of how protective and positive experiences across the life course create health outcomes   | <ul> <li>Increase the number of programs that support the wellbeing of the entire family throughout the life course</li> <li>Educate providers and organizations on "do no harm" messaging</li> </ul>  |

# **Strategy Matrix**

| GOALS  | OBJECTIVES  |
|--|---|
| Overarching Goal: Napa County residents will maintain a healthy weight | Overarching Objective: By 2020, increase the proportion of people who are at a healthy weight by 10%        |
| Goal # 1: Promote the availability and                                 | Objectives:   |
| affordability of healthy food and beverages                            | a. Increase the number of neighborhood stores with fresh produce  |
|  | b. Decrease the Food Environment Index  |
| Goal #2: Educate the community on how to make                          | Objectives:   |
| healthy choices for food and beverages                                 | a. Increase the number of children and adults who eat 5+ servings of fruits and vegetables per day          |
|  | b. Decrease consumption of sugary drinks  |
|  | c. Increase family meals and the understanding of their importance  |
|  | d. Increase % of children and teens who pass the annual Fitness Gram Aerobic Capacity test                  |
| Goal #3: Encourage and support breastfeeding                           | <b>Objective:</b> Increase the % of babies who are exclusively breastfed for the first 6 months of life     |
|  |   |
| Goal # 4: Increase access to opportunities that                        | Objectives:   |
| encourage physical activity  | a. Increase the proportion children and adults who are physically active                                    |
|  | b. Increase access to open spaces and natural areas   |
|  | c. Increase access to exercise opportunities  |
| Goal #5: Strengthen community partnerships to                          | Objectives:   |
| improve coordination of policy and organize for                        | a. Increase community organizing efforts and leadership engagement  |
| change   | b. Increase county and city/town policies directed at prevention and reduction of obesity                   |
|  | c. Increase communication and consistent messaging  |
| Goal #6: Increase and strengthen awareness and                         | Objectives:   |
| understanding of how protective and positive                           | a. Increase mindfulness practices and stress reduction practices  |
| experiences across the life course create health                       | b. Increase the number of families with children 0-5, who access and utilize services that build protective |
| outcomes   | factors and reduce risk factors   |
|  | b. Increase number of providers who understand and adopt "do no harm" messaging                             |
|  | c. Increase the number of community members that are aware of the effect of adverse experiences and         |
|  | stress on health outcomes   |

# Goal # 1: Promote the availability and affordability of healthy food and beverages

**Cancer:** According to the CDC, an estimated one-quarter to one-third of common cancers in the U.S. are caused by the joint effects of excess weight and lack of physical activity. Nearly one-third of adults in Napa County are obese and more than half of Napa County residents get little or no physical activity.

**Diabetes:** In Napa County, an estimated 8.4% of the population has diabetes. Overall, diabetes in Napa County has increased from 5.3% in the 2003 survey year to 8.4% in the 2011-2012 survey year. Due to the relatively small sample size of the survey, the 95% confidence intervals around the estimates are very wide and none of the differences in diabetes prevalence between years can be considered statistically significant.
